ndustrial Products

ne Industrial Products group of USG nanges the way customers think about gypsum products and their applications. We challenge ourselves and our customers to find unique solutions to their design problems utilizing our unmatched industry expertise.

Our products are found in both traditional applications -- including agriculture, omedical, environmental and architectural settings -- and in unique, cutting-edge uses, such as the aerospace industry. Drawing on a century of experience, USG constantly seeks opportunities for the next

neration -- and beyond.

Did you know?

Gypsum is:

- added to some bread and dough mixes as a calcium source and baking aid.
- used as a filler and fire retardant in plastic products. used in Portland cement and specialty cement products for set and expansion control.
- a source of calcium and sulfate sulfur for plant growth. used as a model material for tooth restorations.
- an ingredient in many floor, wall and patching compounds. used with fiberglass to fabricate large, lightweight architectural decorations.
- used as a mold material to fabricate custom body parts for trucks, automobiles and aerospace applications.
- an aid in juice extraction of some fruits and vegetables.
